laserdata

Prepared for **Paytm**

Real-time Soundbox payment alerts for Paytm, on LaserData.

Every confirmed payment reaches **the announcement service in milliseconds and is announced once, even when a bank recovers.** It runs beside your Kafka and AWS IoT, so nothing else has to move.

One Soundbox, one bank recovery,
as the event log sees it.
Now multiply by 1.57 crore.

```
19:42:00.000   bank.recovered   2,870 merchants  paid over 60 s ago to the passbook
19:42:04.318   upi_success      sbx-04172093  seq 18342  ₹240  today ₹6,180 · 37
19:42:04.327   announce         sbx-04172093  "₹240 received" (hi)  device push  +9 ms
19:42:04.540   upi_success      sbx-04172093  seq 18342  callback repeated  dropped, said once
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	The Soundbox broadcast happens **almost instantaneously** after a customer pays; **nearly 7 million devices** on AWS IoT, up to 99.99% availability (AWS case study, 2023). **1.57 crore merchants** now pay for Paytm devices (Q1 FY27). Backend roles list Kafka, Redis or Aerospike, AWS.
Where it fits	**The Soundbox payment alert lane:** payment status keyed by device into the announcement service, said once, late confirmations to the passbook on their own topic. Kafka, AWS IoT and the payment switch stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Paytm: **1 million Soundbox merchants**, UPI and card payments, repeated callbacks, a bank recovery settling 15 minutes of pending payments for 50,000 merchants, app events next door and a Kafka shadow bridge. It prints your lane's p99 and the payments announced on time, twice or stale, every second.

Open the Paytm kit and write-up →

Then a 2–4 week evaluation on one mirrored payment status topic, alongside Kafka. **No advantage, no migration.**
