laserdata

Prepared for **Faire**

Live Fulfilled by Faire stock at checkout, on LaserData.

Every FBF receipt, pick, cycle count and reservation reaches **your multi-brand checkout in milliseconds**, even at a Faire Market peak. It runs beside Kafka, so nothing else has to move.

One SKU in the FBF warehouse,
as the event log sees it.
Now multiply by every brand.

```
14:05:07.120   stock.reserved      B04127:0042   avail 18 → 6 units · case of 6
14:05:09.004   stock.adjusted      B04127:0042   cycle count −2 · avail 6 → 4
14:05:09.008   checkout view: under one case, out of every cart before the next one
14:05:11.200   cart from the synced view: 2 cases accepted, short at the warehouse
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Fulfilled by Faire** holds brands' inventory in a Faire-operated warehouse, synced with a 3PL: 15,000+ orders for 41 brands in six months, now two pods on scaling it and multi-brand checkout. (The Craft, 2025)
Where it fits	**The FBF stock lane:** on hand, reserved and available per SKU, keyed brand:SKU in case packs, read by the multi-brand checkout. Kafka and your CDC path to Iceberg stay.
Next	**FBF shipment status** on the same log: picked, packed and shipped events to retailers and brands, with replay.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Faire: **500 brands × 150 SKUs** in case packs, retailers checking out multi-brand carts, a Faire Market burst, lakehouse CDC next door and a CockroachDB changefeed bridge. It prints your lane's p99 and the lines a periodic inventory sync would accept that the warehouse can't fill, every second.

Open the Faire kit and write-up →

Then a 2–4 week evaluation on one mirrored FBF inventory changefeed, beside Kafka, read by one checkout reader in shadow. **No advantage, no migration.**
