laserdata

Prepared for **CRED**

Real-time payment status for CRED members, on LaserData.

Every UPI and bill payment status reaches **every Propeller node in milliseconds**, and a phone that reconnects gets what it missed, in order. It runs beside Propeller's Redis and NATS.

One member's UPI payment,
as the event log sees it.
Now multiply by every payment.

```
21:04:07.210  PENDING    seq 41     UPI ₹1,499 to a merchant · upi_6110428817
21:04:08.020  SUCCESS    seq 42–43  ₹1,499 paid · cashback ₹25 credited
21:04:08.900  resume     mbr_7348120   device d1 · after seq 41 (last ack)
21:04:08.903  Propeller node: 42–43 replayed from the log, in order · then live
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Propeller, built for UPI flows "where every millisecond matters":** up to 95% faster transaction status updates than polling, plus bill payments, failures with reasons, cashback, coins and CRED Win (CRED, Dec 2024). Channels per member and device, on Redis or NATS (GitHub).
Where it fits	**The payment status lane:** status changes keyed by member, read by every Propeller node, replayed by sequence to a device that reconnects. Propeller, the payment backends and SQS stay.
Next	**An Iggy broker option in Propeller,** next to Redis and NATS, on Apache Iggy's Go SDK. Your team's change, with our help.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy, written in Rust: no JVM and no GC pauses in the lane.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for CRED: **500,000 members at 5,000 status events a second**, UPI and bill payments with failures and refunds, cashback and coins, Propeller nodes with phones dropping and reconnecting mid-payment, a payment peak, a reconciliation export next door and a read-only bridge from Propeller's Redis or NATS. It prints your lane's p99 and the statuses replayed to reconnecting devices, with gaps, every second.

Open the CRED kit and write-up →

Then a 2–4 week evaluation on one mirrored Propeller event feed, beside Propeller and its brokers. **No advantage, no migration.**
