laserdata

Prepared for **Perplexity**

Real-time Computer credits for Perplexity, on LaserData.

Every agent action's credits reach **the credit ledger, and every pause and resume reaches every agent runner, in milliseconds**, even at peak. It runs beside your billing platform and Stripe, so nothing else has to move.

One Computer task at the end of its credits,
as the event log sees it.
Now multiply by every account running agents.

```
09:14:07.412   action.credits   acct_031907  runner-06  model  -21  balance 0
09:14:07.416   credit.decision  acct_031907  PAUSE  no credits  +4 ms
09:14:07.419   pause applied    8/8 agent runners, before the next action  +3 ms
09:14:28.004   credit.decision  acct_031907  RESUME  auto-refill +2,000
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	"Every action an agent takes is **metered, budgeted, and settled**," metering each one in real time and enforcing credit budgets. Out of credits, tasks pause, work saved. Kafka, Kinesis or Pub/Sub for real-time ingestion. (Perplexity job posts, Apr and Jun 2026; help center, 2026)
Where it fits	**The credit lane:** agent actions keyed by account into the credit ledger, pause and resume back to every agent runner. Billing, PostgreSQL, Stripe and the data platform stay.
Next	**Enterprise usage and spend limits** set by admins on the same lane, with replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Perplexity: **8 agent runners, 20,000 accounts, 10,000 agent actions/s**, a credit ledger with bonus, monthly and purchased credits, auto-refill and spending caps, a launch-day spike, an agent-trajectory flood next door and a Kafka shadow bridge. It prints your lane's p99 and credits past zero every second.

Open the Perplexity kit and write-up →

Then a 2–4 week evaluation on one mirrored agent-usage topic, beside your billing platform. **No advantage, no migration.**
