laserdata

Prepared for **FanDuel**

Every wallet event at both in-state sites for FanDuel, on LaserData.

Every bet, settlement and cash out reaches **the second site in the same state in milliseconds**, at the same offset, so rerouting traffic loses nothing, even at kickoff. It runs beside Kafka, and no event leaves the state.

One account, one kickoff, one site down,
as the event log sees it.
Now multiply by every state.

20:31:04.300	bet.placed	nj-0412377 · $25.00 · bal $157.50 · nj-1 offset 88,214,503
20:31:04.306	mirrored	nj-2 · same offset · wallet replica current
20:31:06.200	site.down	nj-1 · traffic rerouted to nj-2, inside NJ
20:31:06.900	bet.placed	nj-0412377 at nj-2 · $20.00 · from the right balance

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**"Local HA and DR in state"**, with "additional sites for scale and DR per state". Bets stay in their state (Wire Act) across about 40 sites, at 5–10x for the Super Bowl.
Where it fits	**The in-state wallet lane:** account and wallet events keyed by account, mirrored to the second site at the same offsets. The wallet database, Confluent and Flink stay.
Next	**AI agents**, such as a betting assistant, act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log** per state: Apache Iggy, one small binary per site, self-hosted on Outposts or Local Zones with LaserData support.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for FanDuel: **two sites in one state, 200,000 accounts**, a 5x kickoff surge, the mirror stopped mid-run, a replica rebuilt from the log, a failover check and a read-only shadow bridge from Kafka. It prints p99 and the events at risk every second.

Open the FanDuel kit and write-up →

Then a 2–4 week evaluation on one state's mirrored wallet events, beside Kafka. **No advantage, no migration.**
