laserdata

Prepared for **Fubo**

Key-play Game Alerts for Fubo, on LaserData.

Every key play reaches Game Alerts in milliseconds and is pushed **the moment its clip is playable**, so a tap always opens the play. It runs beside Kafka and Pub/Sub, so nothing else has to move.

Two home runs, one review,
as the event log sees it.
Now multiply by every live game.

21:14:07.120	play.key	G260907 play 41 · T7 · T14 go-ahead HR · 3-2 · held for clip
21:14:13.485	alert.pushed	clip G260907-41 ready · decided +5 ms · recorded, never twice
21:14:58.900	play.review	play 42 · T03 HR overturned, ruled a double · 3-2
21:15:01.200	alert.held_back	clip G260907-42 ready · call overturned · not pushed

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**"Pro baseball fans can receive push notifications about the biggest plays"**, one tap to the clip (Fubo, April 2026). Streaming on "Apache Kafka, Google Pub/Sub" (Data Engineering role, 2026).
Where it fits	**The game-moments lane:** every pitch, key play, clip-ready event and replay review keyed by game, read by Game Alerts with its own position, kept for the game day. Your moment models, cloud DVR and push stay.
Next	**AI agents**, such as your AI Assistant finding every scoring play, act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Fubo: **a full slate of 15 live pro baseball games, pitch by pitch**, key plays, clips and replay reviews on one log, Game Alerts that pushes only playable clips, a 4× first-pitch surge of viewing events next door and a read-only Kafka bridge. It prints your lane's p99 every second.

Open the Fubo kit and write-up →

Then a 2–4 week evaluation on one mirrored game-moments feed, beside Kafka and Pub/Sub. **No advantage, no migration.**
