laserdata

Prepared for **ClickHouse**

An Apache Iggy source for ClickHouse ClickPipes, on LaserData.

Log and event streams on Apache Iggy land in ClickHouse **exactly once and queryable in about half a second**, with the rules ClickPipes already uses. It sits next to your Kafka sources, so nothing else has to move.

One block through an outage and a crash,
as the pipe sees it.
Now multiply by every Iggy user.

14:02:13.500	insert	990 rows, token iggy-7c1e… queryable +0.5 s
14:02:14.000	insert	ClickHouse down: same block, same token, retried
14:02:29.000	insert	landed once with its original token
14:02:44.210	pipe	killed by SIGKILL after an insert landed
14:02:45.130	restore	same block, same token: ClickHouse drops the repeat

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	ClickPipes' exactly-once mode keeps **a high-water mark per partition and replays blocks with deterministic dedup tokens**. Its streaming sources are all Kafka-protocol brokers. (ClickPipes docs, 2026)
Where it fits	**An Iggy source for ClickPipes:** OpenTelemetry logs into otel_logs for ClickStack, exactly once. Teams on Apache Iggy bring their streams to ClickHouse Cloud.
Next	**Iggy's Kafka-compatible gateway**, in progress, so today's Kafka ClickPipes can read Iggy topics unchanged.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for ClickHouse: **20,000 log events/s from 5,000 pods** into otel_logs, a ClickHouse outage, a SIGKILLed pipe, lost acknowledgements and a shadow of a topic your ClickPipe reads. It prints freshness every second and proves every row landed once.

Open the ClickHouse kit and write-up →

Then a 2–4 week joint evaluation on one mirrored topic, beside the ClickPipe that reads it. **No advantage, no migration.**
