laserdata

Prepared for **Tekion**

Live vehicle availability and prices for Tekion's AI agents, on LaserData.

Every vehicle status, price and mileage change reaches **the context your agents read, in milliseconds**, even in a group repricing pass. It runs beside Kafka, so nothing else has to move.

One vehicle on one rooftop,
as the event log sees it.
Now multiply by every rooftop.

```
10:42:07.310   vehicle.repriced      R0412:1HGCY1F39RA204517   $31,990 → $30,990
10:42:09.004   vehicle.status        R0412:1HGCY1F39RA204517   In Stock → Pending Sale
10:42:09.008   agent context: out of every offer, before the next lead
10:42:11.200   lead from the TTL cache: offered, test drive declined by the DMS
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Real-time context for agents** (inventory, pricing, appointments, service history), with a cache and TTL to balance accuracy, latency and cost; agents act on live records, not an overnight copy. (Tekion job post and blog, 2026)
Where it fits	**The vehicle lane:** status, price and miles per vehicle, keyed rooftop:VIN, read by the context Salesperson AI and T1 Pro use. Kafka and the ARC services stay.
Next	**Service capacity for Scheduler AI** on the same log, so two callers are never offered one slot, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Tekion: **3,000 rooftops × 150 vehicles**, agents answering leads and booking test drives, a group repricing pass, a lakehouse CDC flood and a Kafka shadow bridge. It prints your lane's p99 and the answers a 30 s TTL cache would get wrong, every second.

Open the Tekion kit and write-up →

Then a 2–4 week evaluation on one mirrored vehicle stream, beside Kafka, read by one agent's context in shadow. **No advantage, no migration.**
