laserdata

Prepared for **Ditto**

Ditto CDC Data Bridges to every backend system, on LaserData.

Every Big Peer document change reaches **every downstream system in milliseconds**, in per-document order, even when a landing wave of devices reconnects at once. It runs beside your Kafka bridges and webhooks, so nothing in Big Peer has to move.

One seat's order at the gate,
as the event log sees it.
Now multiply by every landing.

14:02:10.000	device.reconnect	FL00212	crew iPad at the gate · 37 edits
14:02:10.318	documentChanged	FL00212-4C	upsert txnId 4,182,907 · v6 → v7
14:02:10.323	mirror.apply	FL00212-4C	ops, catering, warehouse · oldValue v6 ✓
14:02:10.640	documentChanged	FL00212-4C	txnId 4,182,907 again · dropped, v7 kept

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Big Peer CDC Data Bridges** to Kafka or webhooks, ordered per document, deduplicated by txnId and _id, 12 partitions by default. A new bridge starts with no history. (Ditto CDC docs)
Where it fits	**An Apache Iggy Data Bridge:** a collection's changes keyed by _id, read by every downstream system at its own offset. Big Peer, its transaction log and your Kafka bridges stay.
Next	**AI agents** that act on cabin, store and field data read the same live changes, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Ditto: **200,000 documents in your CDC event shape**, three downstream mirrors, a landing wave, a bulk export and a shadow bridge from a Data Bridge's Kafka topic. It prints each mirror's p99 and broken change chains, every second.

Open the Ditto kit and write-up →

Then a 2–4 week evaluation on one mirrored Data Bridge, beside Big Peer and your Kafka bridges. **No advantage, no migration.**
