laserdata

Prepared for **Cricbuzz**

Ball-by-ball commentary for Cricbuzz, on LaserData.

Every commentary line and every correction reaches **every commentary node and match alerts in milliseconds**, in order, so a wicket overturned on review is corrected everywhere and its alert taken back. It runs beside your commentary services, so nothing else has to move.

One wicket, one review,
as the event log sees it.
Now multiply by every live match.

20:41:07.300	line.new	line 214 v1 · 17.3 · OUT, taken behind · 151/5
20:41:07.304	alert.sent	wicket · IND v AUS 151/5 · recorded, never twice
20:42:11.900	line.edit	line 214 v2 · NOT OUT, overturned on review · 151/4
20:42:11.904	alert.taken_back	wicket alert · node-1 … node-12 show v2, never v1 again

From the creators of APACHE IGGY

15×

faster P99 latency
than Apache Kafka

4×

higher throughput
than Apache Kafka

60–70%

lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**"Enhance and optimize high-speed ball-by-ball commentary services"** (backend role, 2024). "Super-fast scores and immersive ball-by-ball commentary" and "live match alerts" (App Store, 2026). 25M daily users in IPL 2025.
Where it fits	**The commentary lane:** every line and correction keyed by match and versioned per line, read by every commentary node and by match alerts with their own positions, kept for the match day. Your services, apps and push stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Cricbuzz: **30 live matches across T20, ODI and Test, ball by ball**, wickets overturned on review, commentary nodes and match alerts on one log, a 4× innings-break surge next door and a read-only bridge from your commentary feed. It prints your lane's p99 every second.

Open the Cricbuzz kit and write-up →

Then a 2–4 week evaluation on one mirrored commentary feed, beside your services. **No advantage, no migration.**
