laserdata

Prepared for **Samsara**

Real-time Data Connector streams for Samsara, on LaserData.

Each stream subscription gets its own Apache Iggy topic, so **a customer's broker outage delays only that stream**, which then backfills with nothing lost. It runs beside Kinesis, so nothing else has to move.

One broker down, every other stream on time,
as the event log sees it.
Now multiply by every subscription.

09:05:00.000	broker.down	org-0002-gps · offset held at 41,206,733
09:27:07.412	geofenceEntry	org-0117 · vehicle 281401160004213 · seq 86
09:27:07.420	streamed	org-0117-events · +8 ms
09:45:00.000	broker.up	org-0002-gps · 2,040,000 datapoints waiting on its own topic
09:53:12.000	caught.up	org-0002-gps · from 41,206,733 · 0 lost · 40 min of 6 h

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Data Connectors push GPS, diagnostics and events to each customer's own Kafka, MSK, Event Hubs or Pub/Sub.** After an outage a stream resumes "from the last streamed datapoint", up to 6 hours back (Samsara docs).
Where it fits	**The Data Connector stream lane:** one topic per stream subscription, keyed by vehicle ID, streamed at its broker's pace from its own offset and backfilled from the log. Kinesis stays.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Samsara: **150,000 vehicles on 457 stream subscriptions**, connector workers with destination limits, a broker outage and backfill, raw uploads next door and a Kinesis shadow bridge. It prints every subscription's p99 and backlog each second.

Open the Samsara kit and write-up →

Then a 2–4 week evaluation on mirrored Data Connector traffic for a set of subscriptions beside Kinesis, priced per billion datapoints. **No advantage, no migration.**
