laserdata

Prepared for **Decagon**

Real-time task progress for Decagon voice agents, on LaserData.

Every step the reasoning layer finishes reaches **the voice host speaking to that caller in milliseconds**, so each progress update and follow-up answer is current. It runs beside Kafka, so nothing else has to move.

One call, one task, four steps,
as the event log sees it.
Now multiply by every live call.

```
14:32:09.100   task.step   call-0041207  rebook_flight 3/4  holding a seat on the 18:40
14:32:09.800   task.step   call-0041207  rebook_flight 4/4  DONE  rebooked on the 18:40
14:32:09.806   applied     voice-host-03  +6 ms
14:32:10.150   spoken      "You're rebooked on the 18:40."  +0.35 s
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Voice 3 runs **two layers in parallel**: a fast model that talks, a stronger one for **reasoning, tool calls and guardrails**. The agent **narrates its progress** and answers follow-ups during long tasks, instead of hold. Kafka and Flink with **tight p95/p99 targets**. (Decagon blog, job postings)
Where it fits	**The task progress lane:** each step keyed by call to the voice host serving it; a restarted host rebuilds its calls from the log. Kafka, Flink and ClickHouse stay.
Next	**Agent deployments in customer clouds** on one small binary, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Decagon: **8 voice hosts, 20,000 live calls**, a reasoning layer running rebook, refund, card and dispute tasks, a conversation-log flood next door and a Kafka shadow bridge. It prints your lane's p99 and the out-of-date spoken updates every second.

Open the Decagon kit and write-up →

Then a 2–4 week evaluation on one mirrored task-events topic, alongside Kafka. **No advantage, no migration.**
