laserdata

Prepared for **CleverTap**

Real-time outcomes for CleverTap's online learner, on LaserData.

Every checkout, add-to-cart and uninstall reaches the online learner **in milliseconds, so the user's next decision is made with it**, even at IPL peak. It runs beside TesseractDB, so nothing else has to move.

One user, one checkout, one next decision,
as the event log sees it.
Now multiply by an IPL innings break.

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**"once an outcome is observed, the next decision for that user is computed with it"**, in milliseconds (CleverTap, Oct 2026). 50B+ user actions a day; 309M events a minute for one customer in IPL 2023.
Where it fits	**The decision outcome lane:** delivered decisions and goal events keyed by user, into the online learner before the next decision. TesseractDB, the offline learner and delivery stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for CleverTap: **2,000,000 users and 20,000 outcomes a second**, checkouts, uninstalls and frequency caps, a 3× IPL surge, event history next door and a read-only bridge. It prints your lane's p99 and decisions made without the last outcome every second.

Open the CleverTap kit and write-up →

Then a 2–4 week evaluation on one mirrored decision-outcome stream, beside TesseractDB. **No advantage, no migration.**
