laserdata

Prepared for **LinkedIn**

Real-time tracking signals for LinkedIn, on LaserData.

Latency-sensitive signals from Tracking API **reach real-time processing in milliseconds, and wait in a durable log through a restart**. It runs beside Kafka and Northguard, so nothing else has to move.

One member, one restart,
as the event log sees it.
Now multiply by every member.

09:14:02.118	FeedImpressionEvent	pm-4c1e09a2 · seq 211 · applied +3 ms
09:14:04.000	realtime-1 restarts	deploy · stored offset kept on the broker
09:14:06.902	PageViewEvent	pm-4c1e09a2 · seq 212 · waits in the log
09:14:09.315	FeedActionEvent	pm-4c1e09a2 · seq 213 · waits in the log
09:14:16.183	realtime-1 back	212, 213 applied in order · none lost

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Tracking API **sends latency-sensitive signals directly to real-time processing**; Kafka is the asynchronous boundary for near-real-time and offline. Hundreds of billions of events a day, with categories isolated so media bursts can't starve the rest (LinkedIn Engineering, Oct 2026).
Where it fits	**The real-time tracking lane:** latency-sensitive signals keyed by pseudonymized member ID, read by real-time processing partition by partition. Kafka, Northguard and Xinfra stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for LinkedIn: **1M members and 20,000 latency-sensitive signals a second**, real-time processing instances that own their partitions, a 12 s restart, a media burst next door and a Kafka shadow bridge. It prints p99 and lost signals every second.

Open the LinkedIn kit and write-up →

Then a 2–4 week evaluation on one mirrored tracking category, beside Kafka and Northguard. **No advantage, no migration.**
