laserdata

Prepared for **VerSe Dailyhunt**

Real-time ad floors for Dailyhunt and NexVerse.ai, on LaserData.

When breaking news moves what advertisers pay on one language, **every NexVerse.ai bid node has the new floor in milliseconds**, so impressions stop selling below it. It runs beside BigQuery, so nothing else has to move.

One Hindi feed slot on results night,
as the event log sees it.
Now multiply by every placement.

```
20:41:08.497   floor     hi/feed/0042  ₹62 CPM            seq 8,311
20:41:09.611   floor     hi/feed/0042  ₹96 CPM  STEP UP   seq 8,312
20:41:09.618   applied   24/24 bid nodes, before the next auction  +7 ms
20:41:09.619   auctions on hi/feed/0042 now clear at the ₹96 floor or above
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Dailyhunt **earns from ads and serves 350M+ users**, with "huge and instantaneous spikes … caused by breaking news". NexVerse.ai bids inside a 120 ms tmax and runs dynamic floors. (Google Cloud; NexVerse.ai; Inc42)
Where it fits	**The floor lane:** every new floor per placement (language × ad slot) to every NexVerse.ai bid node, rebuilt from the log when the autoscaler adds one. BigQuery and the CDN stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Dailyhunt: **15 languages × 2,000 ad slots, 5,000 floor changes/s**, breaking news on one language, bid nodes that rebuild from the log, an ad-event flood next door and a Pub/Sub shadow bridge. It prints your lane's p99 and stale-floor auctions every second.

Open the Dailyhunt kit and write-up →

Then a 2–4 week evaluation on one mirrored auction-outcome feed, alongside your floor service. **No advantage, no migration.**
