laserdata

Prepared for **Bharti Airtel**

Real-time fraud domain verdicts for Airtel, on LaserData.

When the SMS link scan catches a scam link, **every DNS resolver has the block in milliseconds**, before the next click. It runs beside your resolvers, so nothing else has to move.

One smishing link, first seconds,
as the verdict log sees it.
Now multiply by every link in the blast.

```
10:14:02.118   sms       12,000 from flagged senders carry kyc-update-004212.click
10:14:04.012   verdict   kyc-update-004212.click  CLEAN 0.41  partner score  seq 1
10:14:09.300   verdict   kyc-update-004212.click  BLOCK 0.97  SMS link scan  seq 2
10:14:09.306   applied   every resolver and the SMS link scanner  +6 ms
10:14:10.512   click     kyc-update-004212.click → warning page, the link no longer resolves
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Fraud Detection **blocks fraudulent domains at the DNS level** across SMS, OTT, email and browsing: 187,154 domains, ~3M fraud attempts stopped a day. The domain database is "updated every 24 hours". (GSMA case study, Oct 2025; Airtel, May 2025)
Where it fits	**The verdict lane:** every block, or block lifted, keyed by domain, to every DNS resolver and the SMS link scanner, rebuilt from the log when a resolver is added. Partner scoring, threat feeds and the daily build stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Airtel: **500,000 domains, 3,000 verdicts/s**, a smishing campaign, resolvers that rebuild from the log, a call and SMS record flood next door and a read-only verdict bridge. It prints your lane's p99 and clicks let through every second.

Open the Airtel kit and write-up →

Then a 2–4 week evaluation on one mirrored verdict feed, alongside your resolvers. **No advantage, no migration.**
