laserdata

Prepared for **Twilio Segment**

Real-time destination delivery alerts for Twilio Segment, on LaserData.

Every delivery attempt reaches **the alert check in milliseconds, so a failing destination alerts the customer in about a second**, not over 24 hours. It runs beside Kafka, so nothing else has to move.

One workspace, one destination,
as the event log sees it.
Now multiply by every workspace.

```
09:14:02.000   delivery.outcome   ws-00532 crm   401   delivery-03
09:14:02.300   delivery.alert     ws-00532 crm   ALERT   20 failed   +300 ms
09:14:02.302   alert service      email, Slack, in-app   +2 ms
09:14:02.302   failed events wait in retries for up to 4 h; the customer knows now
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Failed destination calls are **retried for four hours**. The successful delivery rate alert judges **the last 24 hours**; Delivery Overview data lands ~30 s after ingestion. Centrifuge sent **400,000 requests/s** to hundreds of APIs. (Segment docs; Centrifuge post)
Where it fits	**The delivery alert lane:** each attempt's outcome keyed by workspace and destination into one alert check, ALERT and RESOLVED out to the alert service. Delivery and Kafka stay.
Next	**Source volume and Engage activation alerts** on the same lane, judged in seconds instead of over a day.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Twilio Segment: **20,000 workspace destinations, 20,000 attempts a second**, an alert check, planted 401, 429 and 503 incidents, an event-archive flood next door and a Kafka shadow bridge. It prints your lane's p99 and each incident's first failure to alert.

Open the Twilio Segment kit and write-up →

Then a 2–4 week evaluation on one mirrored delivery-results topic, alongside Kafka. **No advantage, no migration.**
