laserdata

Prepared for **Zepto**

Real-time hub stock and prices for Zepto, on LaserData.

Every stock and price change from every dark store reaches **re-validation, cart and the picker app in milliseconds**, even at Diwali peak. It runs beside MSK, so nothing else has to move.

One SKU at one hub,
as the event log sees it.
Now multiply by every hub.

```
19:41:58.604   pricing.updated H042:S0137 ₹32 → ₹29
19:41:59.410   inventory.level H042:S0137 2 → 1
19:42:00.812   inventory.level H042:S0137 1 → 0
19:42:00.815   availability.hidden re-validation, before the next tap
```

From the creators of APACHE IGGY

15×

faster P99 latency
than Apache Kafka

4×

higher throughput
than Apache Kafka

60–70%

lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Search refreshes every 10 s because **results are re-validated against live hub stock**. Festive peaks needed 1.4× nodes. (AWS Big Data Blog, Aug 2026)
Where it fits	**The P0 lane:** Inventory and Pricing topics, keyed hub:sku, read by re-validation, cart and picker. MSK, Flink and OpenSearch stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Zepto: **300 hubs × 2,000 SKUs**, a 10 s index, a 5× festive peak, a P1 flood and an MSK shadow bridge. It prints your lane's p99 every second.

Open the Zepto kit and write-up →

Then a 2–4 week evaluation on one mirrored inventory topic, alongside MSK. **No advantage, no migration.**
