laserdata

Prepared for **Peacock**

Real-time stream limits for Peacock, on LaserData.

Every session start, heartbeat and stop reaches **every playback node's stream-limit view in milliseconds**, so three streams hold and a TV-to-phone switch gets in. It runs beside your stack, so nothing else has to move.

One household at its limit,
one switch from TV to phone.
Now multiply by a kickoff.

```
20:41:12.300   stop       acct-20417733  tv · pb-07  streams 2 of 3
20:41:12.306   applied    in every playback node's view  +6 ms
20:41:14.120   start      acct-20417733  phone · pb-12
20:41:14.121   let in     2 of 3 in view, the phone plays
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Three streams at once per account**, and no sharing outside the household (Peacock help and terms). The Wild Card game reached **32 million viewers**, "the huge volume of audience coming to the platform at the same time" (CTO, 2024).
Where it fits	**The stream-limit lane:** every session start, heartbeat and stop, keyed by account, to every playback node's view, counted once by event ID. Players, CDNs and your data pipeline stay.
Next	**AI agents** act on the same lane, such as reviewing accounts that keep hitting the limit, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Peacock: **3 playback nodes, 12,000 accounts, 40% tuning in at kickoff**, households switching devices at the limit, fourth devices, repeated events, QoE beacons next door, a restart and a Kafka shadow bridge. It prints the lane's p99 every second and viewers wrongly blocked every block.

Open the Peacock kit and write-up →

Then a 2–4 week evaluation on a mirror of your playback session events, alongside your current pipeline. **No advantage, no migration.**
