laserdata

Prepared for **The Trade Desk**

Real-time spend and pacing for The Trade Desk, on LaserData.

Every win's spend reaches **the pacing controllers, and every pause reaches every bid server, in milliseconds**, even in a live-sports spike. It runs beside Kafka, so nothing else has to move.

One ad group in a live game,
as the event log sees it.
Now multiply by every ad group.

```
20:14:07.398   spend.total      ag-04127  bid-03  $9,996.41
20:14:07.412   spend.total      ag-04127  bid-06  $10,000.37
20:14:07.416   pacing.decision  ag-04127  PAUSE   +4 ms
20:14:07.419   pause applied    8/8 bid servers, before their next bid  +3 ms
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Pacing **decides on every one of 20M queries per second**, and live-sports pacing aims to limit overspend on short flights. The pacing team runs Kafka. (Job posts 2025–26; TTD, 2023)
Where it fits	**The spend lane:** win spend keyed by ad group into the pacing controllers, pause and throttle back to every bid server. Kafka, Flink and Spark stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for The Trade Desk: **8 bid servers, 5,000 ad groups, 10,000 wins/s**, pacing controllers, a live-sports spike, a bid-feedback flood next door and a Kafka shadow bridge. It prints your lane's p99 and overspend in USD every second.

Open The Trade Desk kit and write-up →

Then a 2–4 week evaluation on one mirrored spend topic, alongside Kafka. **No advantage, no migration.**
