laserdata

Prepared for **Amplitude**

Real-time device throttling for Amplitude, on LaserData.

Every ingestion node's event counts reach **the throttle service, and every throttle reaches every ingestion node, in milliseconds**, even through a spam burst. It runs beside Kafka, so nothing else has to move.

One device stuck in a tracking loop,
as the event log sees it.
Now multiply by every broken SDK.

```
14:22:04.996   device.count     dev-0012937  ingest-05  24 this second
14:22:05.004   device.count     dev-0012937  ingest-02  30 s avg 30.0/s
14:22:05.007   throttle.state   dev-0012937  THROTTLED  +3 ms
14:22:05.010   throttle applied  8/8 ingestion nodes, before the next request  +3 ms
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Devices over **30 events/s, "measured as an average over a recent time window"**, get a 429. High volume from one device "can be challenging" for the pipeline. Pipelines on Kafka move "billions of events a day". (Amplitude API docs, 2026; job post, 2026)
Where it fits	**The counts lane:** accepted events per device into the throttle service, throttles back to every ingestion node. Kafka, the pipeline, Nova and export stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Amplitude: **8 ingestion nodes, 100,000 devices, 10,000 events/s**, 60 spam devices at 40–300 events/s, a throttle service with a 30-second average, a Session Replay flood next door and a Kafka shadow bridge. It prints your lane's p99 and events let in past the throttle every second.

Open the Amplitude kit and write-up →

Then a 2–4 week evaluation on one mirrored event topic, alongside Kafka. **No advantage, no migration.**
