laserdata

Prepared for **JioHotstar**

Real-time playback health signals for JioHotstar, on LaserData.

Every heartbeat reaches your health check, and every CDN health signal reaches routing and alerting, **in milliseconds, even in the death overs**. It runs beside Kafka, so nothing else has to move.

One cohort on one CDN, death overs,
as the event log sees it.
Now watch every cohort and CDN, every second.

22:41:07.200	heartbeat.buffering	airtel:KA|cdn-b · first bad heartbeat in 40
22:41:07.950	cdn.degraded	airtel:KA|cdn-b · seq 412 · Sev2 · score 0.41
22:41:07.954	routing.applied	+4 ms · new plays to cdn-a and cdn-c
22:41:07.955	alert.raised	airtel:KA|cdn-b · to live ops

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**2.1 million messages a second**; the heartbeat of every playback session feeds real-time alerting and QoS (Oct 2026). Cohort-level CDN routing cut **playback failures by 11%** at 50M+ concurrency (Mar 2026).
Where it fits	**The playback health lane:** minimized heartbeats in, keyed by cohort and CDN; health signals out to routing and alerting. Kafka, the splitter and ARGUS stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for JioHotstar: **10,000 heartbeats a second with a 3× death-overs surge**, 48 cohorts on 3 CDNs, injected CDN incidents, a router that counts late signals, full heartbeats next door and a Kafka shadow bridge. It prints both hops' p99 every second.

Open the JioHotstar kit and write-up →

Then a 2–4 week evaluation on one mirrored heartbeat topic and its health signals, beside Kafka. **No advantage, no migration.**

The JioHotstar name identifies the intended reader only; no affiliation is implied. Facts are from the public JioHotstar engineering blog posts "The Kafka Optimization That Saved Us $350K a Year" (Oct 2026) and "Orchestrating JioHotstar Traffic: The Difference Between a Loading Spinner and a Winning Six" (Mar 2026). Cohorts, CDN names, scores and timestamps are illustrative; the 300-play figure assumes 300 new plays a second in one cohort.
