laserdata

Prepared for **Ather Energy**

Real-time charging, theft and crash alerts for Ather Energy, on LaserData.

Every charging, LockSafe and crash event reaches **the alert service in milliseconds, even during a reconnect storm.** It runs beside your MQTT broker and Kafka, so nothing else has to move.

One scooter, one reconnect,
as the event log sees it.
Now multiply by the fleet.

```
22:41:00.000   reconnect         3,214 scooters   events older than 120 s to the backlog
22:41:04.512   parked_movement   ath-0482117   seq 88213   parked, locked
22:41:04.520   rider.alert       ath-0482117   LockSafe   app push, support console   +8 ms
22:41:04.731   parked_movement   ath-0482117   seq 88213   resent (lost ack)   dropped
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	A self-managed broker handles **40 billion messages a day**, **3,000–5,000 a second** of them for customer features, over Kafka. A network drop and sudden reconnections put **significant back-pressure on Kafka**; Cloud Connect saves data until the cloud acknowledges it. (Ather engineering blog, 2022–2023)
Where it fits	**The rider alert lane:** charging, LockSafe and crash events keyed by scooter into the alert service, the reconnect backlog to ride history on its own topic. The MQTT broker, Kafka and Spark stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Ather: **500,000 scooters**, charging, parked-movement and crash events, resends, a reconnect storm of 25,000 scooters flushing 10 minutes each, full sensor packets next door and a Kafka shadow bridge. It prints your lane's p99 and the alerts on time, pushed twice or stale, every second.

Open the Ather Energy kit and write-up →

Then a 2–4 week evaluation on one mirrored vehicle event topic, alongside Kafka. **No advantage, no migration.**
