laserdata

Prepared for **Copart**

Real-time VB3 lot state and live bids for Copart, on LaserData.

Every accepted bid, countdown restart and sale reaches **every bidder's screen in milliseconds**, in every yard selling at once, so members bid on the current price. It runs beside VB3, so nothing else has to move.

One lot on one sale lane,
as the event log sees it.
Now multiply by every lane.

```
14:02:11.620   bid.accepted     Y112-B   lot 41239870   $2,450 MX
14:02:12.940   bid.accepted     Y112-B   lot 41239870   $2,500 UA
14:02:12.943   edge nodes: $2,500 and the UA flag on every screen, countdown restarted
14:02:13.210   bid.placed       Y112-B   lot 41239870   $2,550 US → high bidder
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**"We sell virtually all our vehicles on ... VB3."** Members bid live online; "when bidding stops, a countdown is initiated." About 1 million members in 185+ countries; 4 million+ units a year. (Copart 10-K FY2025, Sep 2026 results)
Where it fits	**The VB3 live lot lane:** high bid, bidder flag and countdown per sale lane, keyed by lane, read by every bidder-facing edge; live bids back. VB3, G2 and your data platform stay.
Next	**AI agents** for member support and your AI-ready data platform read the same live lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Copart: **400 sale lanes across 200 yards**, live bids with a countdown after each one, two edge nodes (one restarted), a member-activity flood and a Kafka shadow bridge. It prints your lane's p99, stale-screen bids next to a screen refreshed every second, and bid-to-flag time, every second.

Open the Copart kit and write-up →

Then a 2–4 week evaluation on one mirrored lot-state feed, beside VB3. **No advantage, no migration.**
