laserdata

Prepared for **Deepgram**

Real-time usage metering for Deepgram, on LaserData.

Every live stream's usage reaches **the per-project usage summary in milliseconds, counted once even when it is sent twice**, even at peak. It runs beside your billing pipeline, so nothing else has to move.

One live transcription stream,
as the event log sees it.
Now multiply by every open stream.

```
14:22:04.004   usage     req 7f3a2c  proj_01842  nova-3  seq 42  41.98 s
14:22:04.011   summary   proj_01842  14:22  +0.99 s  +7 ms
14:22:04.236   usage     req 7f3a2c  seq 42 (retry)  +0 s, counted once
14:22:09.004   usage     req 7f3a2c  seq 47 fin  46.95 s metered = 46.95 s served
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Usage messages from inference, **"captured with sub-second reliability at scale, with idempotency and exactly-once semantics"**, rolled into summaries by customer, product, time window and pricing dimension. Rust preferred. Per-second billing. (Deepgram job post, Apr 2026; pricing, 2026)
Where it fits	**The usage lane:** each live stream's billable audio, keyed by project, into per-minute summaries for the Console and billing sync. Your billing platform, Postgres and reconciliation stay.
Next	**Entitlement checks and voice agent usage** on the same lane, with replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Deepgram: **8 engine servers, 20,000 live streams, 5,000 projects**, one usage message per stream a second with retries sent twice, a request-log flood next door and a read-only shadow bridge. It prints your lane's p99, streams reconciled and retries absorbed every second.

Open the Deepgram kit and write-up →

Then a 2–4 week evaluation on one mirrored usage stream, beside your billing pipeline. **No advantage, no migration.**
