laserdata

Prepared for **Sierra**

Real-time customer memory for Sierra, on LaserData.

Every fact a customer gives reaches **the memory store every channel's agent reads, in milliseconds**, before their next message. It runs beside your eventing pipelines, so nothing else has to move.

One customer, one channel switch,
as the event log sees it.
Now multiply by every conversation.

```
14:02:31.118   turn          cust-0731184  turn 6  voice-02  "order 58213 arrived damaged"
14:02:31.125   memory.update  cust-0731184  current to turn 6  +7 ms
14:02:31.128   memory store   current to turn 6  +3 ms
14:02:33.520   turn 7 (sms-01)  photo link opened mid-call, memory already there  +2.4 s
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	The Context Engine runs **real-time eventing, streaming ETL and an Iceberg lakehouse**, and owns long-term agent memory. Agent Data Platform remembers **across sessions and channels**, on hundreds of millions of calls a year. (Sierra blog and job posts, 2025–26)
Where it fits	**The memory lane:** each turn keyed by customer into the memory builder, each customer's memory into the store every channel's agent reads. Your eventing and the lakehouse stay.
Next	**More real-time signals** for agents on the same log, with session, context and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Sierra: **12 agent runtimes on voice, chat and SMS, 5,000 turns/s**, a memory builder, a disruption surge, a transcript flood next door and a Kinesis or Kafka shadow bridge. It prints your lane's p99 and the channel switches that would ask again every second.

Open the Sierra kit and write-up →

Then a 2–4 week evaluation on one mirrored conversation-events stream, alongside your eventing stack. **No advantage, no migration.**
