laserdata

Prepared for **Cashfree Payments**

Real-time merchant usage metering for Cashfree Payments, on LaserData.

Every payment's usage reaches **the subscription's live day total in milliseconds, counted once**, and waits in the log while Kill Bill is down, nothing lost. It runs beside Kafka, so nothing else has to move.

One merchant subscription,
as the event log sees it.
Now multiply by every merchant.

```
14:22:04.004   usage       sub_0031842  cfpay_00009184211  seq 211  ₹1,250
14:22:04.011   day total   sub_0031842  211 txns  ₹2,48,310  +7 ms
14:22:04.184   usage       cfpay_00009184211 (retry)  seq 211  +₹0, counted once
14:22:08.420   Kill Bill   back up · seq 212–215 recorded in order · = day total
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Usage (**txnCount, txnVolume**) published to Kafka for Kill Bill, so it keeps flowing when Kill Bill is unavailable, with a trackingId for dedupe; a plugin that **"records all raw usage data, ensuring nothing is missed."** Teams want better dedupe and retry visibility. (Cashfree GitHub, 2024; blog, 2023)
Where it fits	**The usage lane:** each payment's usage, keyed by subscription, into a live day total and into Kill Bill at its own pace. Kafka, Kill Bill and invoicing stay.
Next	**Plan-limit alerts and backfills** from the same retained usage log, with replay.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Cashfree Payments: **4,000 payments/s over 200,000 subscriptions** in your plugin's message shape, retries sent twice, a Kill Bill outage mid-run and a read-only bridge from **stream.usagemetrics**. It prints the lane's p99, subscriptions reconciled to the paisa and the Kill Bill backlog drained.

Open the Cashfree Payments kit and write-up →

Then a 2–4 week evaluation on one mirrored usage topic, beside Kafka and Kill Bill. **No advantage, no migration.**
