laserdata

Prepared for **Motive**

Real-time cargo door and temperature alerts for Motive, on LaserData.

Every door change reaches **the alert rules, and every alert reaches the driver, in milliseconds**, while the door is still open. It runs beside Kafka and Flink, so nothing else has to move.

One trailer, one door,
as the event log sees it.
Now multiply by every asset.

```
14:22:05.318   door.open       trl-0418273  seq 9214  3.4 °C  no approved geofence
14:22:05.324   cargo.alert     trl-0418273  door_open_outside_geofence  +6 ms
14:22:05.327   alert delivered  driver app, dashboard, webhooks  +3 ms
14:22:58.402   door.close      trl-0418273  seq 9215  4.9 °C  +53 s
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Kafka and Flink pipelines** turn telemetry from **hundreds of thousands of IoT devices** (Asset Gateways, door and environmental sensors, beacons) into real-time locations, geofence events, trips and alerts. Door alerts fire when a door opens outside an approved geofence. (Motive job post and sensor launch, 2026)
Where it fits	**The cargo alert lane:** door changes and readings keyed by asset into the alert rules, alerts out to the driver app and back office. Kafka, Flink and the gateways stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Motive: **300,000 assets, a reading a minute each**, door changes as they happen, alert rules with approved geofences, a morning-dispatch peak, dead-zone backfill next door and a Kafka shadow bridge. It prints your lane's p99 and the door alerts that reached the driver while the door was open, every second.

Open the Motive kit and write-up →

Then a 2–4 week evaluation on one mirrored sensor topic, alongside Kafka and Flink. **No advantage, no migration.**
