laserdata

Prepared for **ZEE5**

Real-time Continue Watching for ZEE5, on LaserData.

Every playback heartbeat reaches **the viewer's resume point in milliseconds**, so a switch from TV to phone picks up where they stopped, with heartbeats sent more often than once a minute. It runs beside Confluent Cloud and ScyllaDB, so nothing else has to move.

One viewer, one episode, two screens,
as the event log sees it.
Now multiply by a million at the evening peak.

```
21:15:42.310 TV · stop
position 38:42, heartbeat #231

on the resume point · +9 ms
row: viewer · episode 212

phone resumes at 38:42
answer in 6 ms, nothing to rewatch
```

21:15:32.307	heartbeat	U004812734 · #230 · TV · episode 212 · 38:32
21:15:42.310	heartbeat.stop	U004812734 · #231 · TV · 38:42 · applied +9 ms
21:15:49.204	resume.request	U004812734 · phone · episode 212
21:15:49.210	resume.answer	38:42 · from heartbeat #231 · +6 ms

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**100B+ heartbeats a day,** one every 60 s per viewer, through a heartbeat topic into ScyllaDB for Continue Watching. "When we needed to sample more heartbeats per minute, our costs started to rise immediately." (then CTO, 2024)
Where it fits	**The heartbeat lane:** position keyed by viewer, into the resume point on the next device. Confluent Cloud, ksqlDB and ScyllaDB keep the rest.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for ZEE5: **200,000 viewers with a heartbeat every 10 s**, every device switch checked against where the viewer stopped, a 3× peak, a 20× release drop next door and a Confluent Cloud shadow bridge. It prints your lane's p99 every second.

Open the ZEE5 kit and write-up →

Then a 2–4 week evaluation on one mirrored heartbeat topic, alongside Confluent Cloud. **No advantage, no migration.**
