laserdata

Prepared for **Mux**

Streaming exports of finished views for Mux Data, on LaserData.

Each streaming export gets its own Apache Iggy topic, so **a customer's throttled or unreachable stream delays only its own views**, which then backfill with nothing lost. It runs beside Kafka and Kafka Connect, so nothing else has to move.

One customer's stream down, every other export on time,
as the event log sees it.
Now multiply by every export.

20:10:00.000	stream.down	env-0001-kinesis · offset held at 88,412,907
20:31:22.418	view.finished	env-0117 · view 0075c0a1e2f4 · seq 3,214
20:31:22.427	exported	env-0117-pubsub · +9 ms
20:40:00.000	stream.up	env-0001-kinesis · 1,620,000 views waiting on its own topic
20:48:43.000	caught.up	env-0001-kinesis · from 88,412,907 · 0 lost · 4 shards

From the creators of APACHE IGGY

15×

faster P99 latency
than Apache Kafka

4×

higher throughput
than Apache Kafka

60–70%

lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Mux Data streams finished views to each customer's Kinesis or Pub/Sub "within about one minute after the view ends", on Kafka Connect.** A failed sink task recovers only by "restarting the individual failed tasks" (Mux blog and docs).
Where it fits	**The streaming export lane:** one topic per export, keyed by view ID, written at its destination's pace from its own offset and backfilled from the log. Kafka stays.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Mux: **2,500 finished views a second on 150 streaming exports**, export workers with Kinesis and Pub/Sub limits, a destination outage and backfill, player beacons next door and a Kafka shadow bridge. It prints every export's p99 and backlog each second.

Open the Mux kit and write-up →

Then a 2–4 week evaluation on mirrored finished views for a set of exports beside Kafka Connect, priced per billion views. **No advantage, no migration.**
