laserdata

Prepared for **Block**

Real-time payment token changes for Afterpay, on LaserData.

Every token change from the payments platform's scheduled jobs reaches **every subscribing service in milliseconds**, signed and free of card numbers. It runs beside Kafka, so nothing else has to move.

One customer's card, reissued,
as the event log sees it.
Now multiply by every updater run.

02:00:00.400	token.card_updater	C00418207	tok_…3188 → tok_…3191, exp 09/29
02:00:00.404	collections.cache	C00418207	seq 7 applied · HMAC verified
02:00:01.100	instalment.charge	C00418207	2 of 4, $37.50 · tok_…3191
02:00:01.101	vault: the token current at charge time · the charge can go through		

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Scheduled jobs change payment tokens** and other Afterpay systems must hear about it, so the payments platform publishes to Kafka from its PCI zone, with clients that sign every message and mask card numbers. 9+ TB of Kafka data a day. (Cash App Code Blog)
Where it fits	**The payment token lane:** token changes keyed by customer, signed, read by every subscriber's cache. Kafka, the sink connectors and Databricks stay.
Next	**AI agents**, such as ones built on goose, read the same signed, replayable log, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Block: **500,000 customers' payment tokens**, a card updater run, subscribers that verify every record, a warehouse feed next door and a Kafka shadow bridge. It prints your lane's p99 and instalments charged on a superseded token, every second.

Open the Block kit and write-up →

Then a 2–4 week evaluation on one mirrored token notification topic, beside Kafka. **No advantage, no migration.**
