laserdata

Prepared for **Myntra**

Real-time session context for Myntra search suggestions, on LaserData.

Every search, product view and bag add reaches the shopper's session context **in milliseconds, so the next type-ahead leads with what they want now**. It runs beside your Kafka, so nothing else has to move.

One shopper, one change of mind, one search,
as the event log sees it.
Now multiply by the first hour of EORS.

21:04:12.310	action.view	U0418820937 · sarees · Anouk · after 6 sneaker views
21:04:12.315	context.applied	seq 41 · sarees 0.6 › sneakers 0.5 · +5 ms
21:04:13.150	typeahead.request	"s" · needs seq 41
21:04:13.153	typeahead.boosted	1. sarees for women · 2. sneakers for women

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Contextual type-ahead lifted CTR **3%**, built on a context that "grows with every user signal" (Myntra Engineering, 2018). NRT auto-suggest needs input **"analyzed at very low latency"**; 18.8 billion events on BFF 2022's first day (2023).
Where it fits	**The session context lane:** each action keyed by user, folded into the shopper's context before the next type-ahead. Kafka, Spark Streaming and Aerospike stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Myntra: **500,000 shoppers in session and 20,000 actions a second**, changes of mind, a 2× sale-opening surge, a clickstream next door and a read-only Kafka bridge. It prints your lane's p99 and stale suggestions every second.

Open the Myntra kit and write-up →

Then a 2–4 week evaluation on one mirrored shopper-actions stream, beside your Kafka. **No advantage, no migration.**
