laserdata

Prepared for **Sentry**

Real-time cron check-ins for Sentry Crons, on LaserData.

Every check-in from Relay reaches the monitor clock **in milliseconds**, so a job that never checked in is marked missed on the minute, and a late partition holds the tick. It runs beside Kafka, so nothing else has to move.

One missed nightly job,
as the monitor clock sees it.
Now multiply by every monitor.

02:00:00.412	check_in.in_progress	hourly-etl partition 7 read +3 ms
02:00:41.930	check_in.ok	hourly-etl runtime 41 s
02:01:00.000	clock_pulse	one pulse into each of 128 partitions
02:01:00.009	clock.tick	02:01, the slowest partition is in +9 ms
02:01:00.011	monitor.missed	invoices run due 02:00, alert goes out

From the creators of APACHE IGGY

15×

faster P99 latency
than Apache Kafka

4×

higher throughput
than Apache Kafka

60–70%

lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Your clock follows **the slowest of 128 partitions**, so a backlog on one holds missed and timeout detection for all (getsentry/sentry #55821). In September 2026, losing the partition clocks in Redis **marked check-ins missed** (#124511).
Where it fits	**The Crons check-in lane:** check-ins and clock pulses keyed by monitor, read by the monitor consumer that runs the clock, with each partition's clock taken from the log. Relay, SDKs and alert rules stay.
Next	**AI agents** act on the same log, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Sentry: **50,000 monitors** with the top-of-the-minute burst, jobs that never check in, jobs that hang, a stuck partition, an error storm next door and a Kafka shadow bridge. It prints check-in p99 and tick lag, and checks every missed and timeout mark.

Open the Sentry kit and write-up →

Then a 2–4 week evaluation on a mirror of ingest-monitors, beside your current consumer. **No advantage, no migration.**
