laserdata

Prepared for **Moloco**

Real-time item availability for Moloco Commerce Media, on LaserData.

When an advertised item sells out or is blocked, **every Decision API server stops returning it in milliseconds**, so no ad leads a shopper to a sold-out page. It runs beside Pub/Sub and Kafka, so nothing else has to move.

One TV in a flash sale,
as the event log sees it.
Now multiply by every item.

```
12:00:01.120    stock     electronics/itm-0418833  3 left             seq 41
12:00:03.412    stock     electronics/itm-0418833  0  OUT OF STOCK    seq 42
12:00:03.418    applied   40/40 Decision API servers, before the next decision  +6 ms
12:00:03.650    search "tv" on dapi-17: 10 sponsored items, itm-0418833 not among them
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	The Item Kill Switch exists so out-of-stock or reported items are **"immediately pulled from ad serving"**; catalog feeds land daily, every 4 hours or hourly. Decision API p95 is about 100 ms, on GKE, with Pub/Sub and Kafka. (MCM docs; Google Cloud; job posts)
Where it fits	**The item status lane:** every stock-out, restock and kill-switch block, keyed by item, to every Decision API server, rebuilt from the log when GKE adds a pod. Feeds, Bigtable and BigQuery stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for MCM: **200,000 items in live campaigns, 5,000 status changes/s** with stock-outs and kill-switch bulk blocks, a flash sale on one category, servers that rebuild from the log, a shopper-event flood next door and a Pub/Sub or Kafka shadow bridge. It prints your lane's p99 and ads for unavailable items every second.

Open the Moloco kit and write-up →

Then a 2–4 week evaluation on one retailer's mirrored item status, alongside your current path. **No advantage, no migration.**
