laserdata

Prepared for **BlackBuck**

Real-time fuel theft alerts for BlackBuck, on LaserData.

Every fuel-sensor ping reaches **the fuel rules, and every drain alert reaches the truck owner, in milliseconds**, while the fuel is still being drained. It runs beside Kafka, so nothing else has to move.

One parked truck, one tank,
as the event log sees it.
Now multiply by every truck.

```
01:12:40.118   ping          gps-2207415  seq 48120  ignition off  212.4 L  stop starts
01:32:15.420   ping          gps-2207415  seq 48238  ignition off  193.6 L
01:32:15.426   fuel.alert    gps-2207415  fuel_drain  18.8 L under the stop's high  +6 ms
01:32:15.429   alert delivered  owner's app, dashboard, SMS  +3 ms
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**Device pings go to Kafka topics** for the timeline and alarm services. **Fuel sensors** send fuel level, ignition and location through the GPS device; thefts and refuels are told apart by ignition, speed and a time window. **500K+ active devices; 4 in 10 owners** report fuel pilferage each year. (BlackBuck engineering blog, 2020 and 2025; Annual Report FY26)
Where it fits	**The fuel alert lane:** fuel-sensor pings keyed by device into the drain and refuel rules, drain alerts out to the owner's app, dashboard and SMS. Kafka, ingestion and the alarm service stay.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for BlackBuck: **50,000 trucks with fuel sensors, a ping every 10 s**, drains, refuels and sensor noise, drain and refuel rules, low-network history next door and a Kafka shadow bridge. It prints your lane's p99, the drain alerts that arrived while the fuel was still going and the litres still in the tank, every second.

Open the BlackBuck kit and write-up →

Then a 2–4 week evaluation on one mirrored ping topic, alongside Kafka. **No advantage, no migration.**
