laserdata

Prepared for **OpenAI**

Real-time API key shutoff for OpenAI, on LaserData.

Every request reaches **the enforcement service, and every key disable reaches every request router, in milliseconds**, before that key's next request. It runs beside Kafka, so nothing else has to move.

One stolen API key,
as the event log sees it.
Now multiply by every key in use.

```
09:41:20.000   api.request     key_031877   router-05   AS41822, a new network
09:41:20.098   api.request     key_031877   router-02   20th in 0.5 s, 7 networks
09:41:20.103   key.status      key_031877   DISABLED (hijack)   +5 ms
09:41:20.107   disable applied   8/8 routers, before the key's next request   +4 ms
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Scaled Abuse builds **"real-time detection, investigation workflows, and enforcement"**, balancing fraud loss. Leaked keys are "disabled immediately". Key management, request routing and streaming sit in one API team, on Kafka and Azure. (OpenAI job posts and Help Center, 2026)
Where it fits	**The key lane:** requests keyed by API key into enforcement, disables back to every request router. Kafka, Flink, your abuse models and key store stay.
Next	**AI agents** investigate on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for OpenAI: **8 request routers, 50,000 API keys, 10,000 requests/s**, an enforcement service, planted stolen and leaked keys, a request-log flood next door and a Kafka shadow bridge. It prints your lane's p99 and requests served on disabled keys in USD every second.

Open the OpenAI kit and write-up →

Then a 2–4 week evaluation on one mirrored request-records topic, alongside Kafka. **No advantage, no migration.**
