laserdata

Prepared for **Affle**

Real-time click-to-install fraud checks for Affle, on LaserData.

Every click and install reaches **the mFaaS scorer, and every publisher block reaches every attribution node, in milliseconds**. It runs beside Kafka, so nothing else has to move.

One device, one stolen install,
as the event log sees it.
Now multiply by 3.9 billion devices.

```
21:13:52.410   click     aid-04417250  pub-0412  genuine ad
21:14:31.200   click     aid-04417250  pub-0977  redirect 12 ms  as the install begins
21:14:32.900   install   aid-04417250  credited to pub-0977  CTIT 1.7 s
21:14:32.906   publisher.block  pub-0977  15/15 under 10 s  +6 ms  4/4 nodes +4 ms
21:14:33.400   install   aid-09120388  pub-0977  node-03  held, not billed
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**99.6% of revenue is CPCU.** Your patented check scores click-to-install time **in real time** and blocks offending publishers **so advertisers pay only for authentic conversions**. Kafka in the RTB pipelines. (Affle filings, job postings)
Where it fits	**The click-to-install lane:** clicks and install postbacks keyed by device into the mFaaS scorer, publisher blocks back to every attribution node. Kafka and the bid path stay.
Next	**Fraud and bidding agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Affle: **8 attribution nodes, 10,000 clicks a second** from 500 publishers, a click-to-install scorer, planted click injection, a bid-log flood next door and a Kafka shadow bridge. It prints your lane's p99 and the conversions billed after a block every second.

Open the Affle kit and write-up →

Then a 2–4 week evaluation on mirrored click and postback topics, alongside Kafka. **No advantage, no migration.**
