laserdata

Prepared for **Meesho**

Real-time order notifications for Meesho, on LaserData.

Every order update your services push to Meecom reaches the sender **in milliseconds, even while a 170-million-recipient sale campaign goes out**. It runs beside Confluent, so nothing else has to move.

One order on sale day,
as the event log sees it.
Now multiply by 75,000 a minute.

12:00:00.000	campaign.started	sale-day · 170,000,000 recipients · own topic
12:02:14.540	order.placed	MO4185092230 · seq 1 · push
12:03:05.118	order.confirmed	MO4185092230 · seq 2 · push
12:03:05.132	meecom.sent	push · +14 ms · 54.3M campaign sends still queued

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Meecom sends **10B+ messages a day** and puts critical ones ahead of promotional. You chose usage pricing to stop provisioning Kafka for sale peaks. (Meesho Tech blog; Confluent)
Where it fits	**The order-update lane:** order notifications keyed by order ID, from your services to Meecom's sender. Confluent keeps ingestion, analytics and the rest.
Next	**AI agents** act on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Meesho: **75,000 orders a minute**, a 170M-recipient campaign next door, a rate-limited Meecom sender and a Confluent shadow bridge. It prints your lane's p99 every second.

Open the Meesho kit and write-up →

Then a 2–4 week evaluation on one mirrored order-update topic beside Confluent, priced per billion messages. **No advantage, no migration.**
