laserdata

Prepared for **Vapi**

Real-time provider failover for Vapi voice agents, on LaserData.

Every STT, LLM and voice outcome reaches **the health evaluator, and every degraded verdict reaches every call worker, in milliseconds**, before the next turn. It runs beside MSK, so nothing else has to move.

One provider, one region, one failure,
as the event log sees it.
Now multiply by every provider and region.

```
14:32:08.000   provider.outcome  llm-a eu  FAILED    worker-02
14:32:08.430   provider.health   llm-a eu  DEGRADED  27% failed  +430 ms
14:32:08.434   verdict applied   8/8 call workers  +4 ms
14:32:08.900   call-0028114 turn 6  worker-05, starts on llm-b  +0.5 s
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Every external provider is **a possible failure point**, with fallback chains and circuit breakers toward **99.99%**. Failover happens per call, **within milliseconds of detecting a failure**. Kafka on MSK per regional cell. (Vapi blog, docs and job postings)
Where it fits	**The provider health lane:** each STT, LLM and voice outcome keyed by provider and region into one evaluator, degraded and recovered verdicts back to every call worker. MSK and the call path stay.
Next	**Agent events** (turns, tool calls, transfers) on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Vapi: **8 call workers, 20,000 live calls**, a health evaluator, planted provider incidents, a campaign surge, a call-log flood next door and an MSK shadow bridge. It prints your lane's p99 and the turns sent to a provider after its verdict every second.

Open the Vapi kit and write-up →

Then a 2–4 week evaluation on one mirrored provider-events topic, alongside MSK. **No advantage, no migration.**
