laserdata

Prepared for **New Relic**

Real-time pipeline watermarks for New Relic alerts, on LaserData.

Every time wave, and every point of it that reaches the end of a cell's pipeline, is in the watermark in milliseconds, so **alert windows close only on complete data and a stalled cell is flagged while it is stalled**. It runs beside Kafka, so nothing else has to move.

One cell, one bad broker,
as the time-wave lane sees it.
Multiply by every cell and pipeline.

14:02:00.000	wave.emitted	cell-07 · logs · generation 14:02:00 · 64 points, one per partition
14:02:00.900	wave.tally	48 of 64 arrived · partitions 16–31 not seen
14:02:30.007	watermark	+7 ms · behind, stuck at 14:02:00 · partitions 16–31 missing
14:09:10.002	alert window	14:02 closed on all 64 points · no false loss of signal

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Delayed data can be missing from alert queries and **cause false positive or negative alerts**; lag measured from traffic sees a blockage only once it clears. Time waves give the watermark. (New Relic blog, Dec 2023)
Where it fits	**The time-wave watermark lane:** generations emitted and points arrived, keyed by cell and source pipeline, on a log outside the cell it measures. Kafka, Flink and NRDB stay as they are.
Next	**AI agents** ask the same lane whether a cell's data is complete before they answer, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for New Relic: **40 cells, 4 source pipelines, 64 Kafka partitions each, a time wave every second**, one broker's partitions stalling in a cell, repeated tallies, every watermark checked against the truth, a backlog drain next door and a Kafka shadow bridge. It prints your lane's p99 every second.

Open the New Relic kit and write-up →

Then a 2–4 week evaluation on one cell's time waves, alongside Kafka. **No advantage, no migration.**
