laserdata

Prepared for **Gametime**

Real-time Zone Deals inventory for Gametime, on LaserData.

Every listing change reaches **every Zone Deals seat picker in milliseconds**, even in an event's final hour, so the seats Gametime picks are still there at the price the fan paid. It runs beside Confluent Kafka, so nothing else has to move.

One zone of one event,
in its final hour.
Now multiply by every zone.

```
18:41:01.120   listing.auto_priced     E00412:UPPER-CORNER   L-321 $68 → $62
18:41:02.310   listing.sold            E00412:UPPER-CORNER   L-305 2 → 0 left
18:41:02.313   seat picker: L-305 out of the zone pool, before the next order
18:41:03.500   zone_deal.order         E00412:UPPER-CORNER   2 tickets at $64 → L-321
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	**"You pick the Zone. We pick the seat."** Sellers on direct API feeds, automatic pricing above each seller's floor, the best deals in the last 90 minutes, and "real-time pricing engines to sub-second checkout". (Gametime blog and careers page)
Where it fits	**The Zone Deals pool lane:** tickets left, price and floor per listing, keyed event:zone, read by every seat picker. Confluent Kafka and your services stay.
Next	**AI agents** for support and post-order help read the same live listings, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Gametime: **1,000 events × 8 zones × 30 listings**, automatic pricing, Zone Deals orders, one event's final hour, an app-event flood and a Confluent shadow bridge. It prints your lane's p99 and re-picks, next to a pool synced every 3 s, every second.

Open the Gametime kit and write-up →

Then a 2–4 week evaluation on one mirrored listing feed, beside Confluent Kafka and your Zone Deals service. **No advantage, no migration.**
