laserdata

Prepared for **Stripe**

Real-time card testing controls for Stripe, on LaserData.

Every card attempt reaches **the detector, and every intervention reaches every API node, in milliseconds**, before the tester's next try. It runs beside Kafka, so nothing else has to move.

One card testing attack,
as the event log sees it.
Now multiply by every business.

```
14:02:07.000   card.attempt    acct_0418226  setup_intent  $0.00  declined
14:02:07.180   card.attempt    acct_0418226  27th in 1 s, 23 declined, 27 cards
14:02:07.184   attack.control  acct_0418226  CHALLENGE (card testing)  +4 ms
14:02:07.188   control applied  12/12 API nodes, before the script's next attempt  +4 ms
```

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Under a card testing attack, Stripe **"dynamically choose[s] interventions"** on "a small, precise slice of traffic" and eases them when it subsides; a flash sale must not trip them. About 50 Kafka clusters. (Stripe docs and blog, 2024–2026; Replay 2023)
Where it fits	**The attempt lane:** card attempts keyed by business into the detector, interventions back to every payments API node. Kafka, Radar, Shepherd and your models stay.
Next	**AI agents** investigate on the same lane, with session, context, memory and replay from Laser SDK.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Stripe: **12 payments API nodes, 100,000 businesses, 8,000 card attempts/s**, a card testing detector, planted attacks and flash sales, a request-log flood next door and a Kafka shadow bridge. It prints your lane's p99 and tester attempts reaching issuers after controls, every second.

Open the Stripe kit and write-up →

Then a 2–4 week evaluation on one mirrored attempt-outcomes topic, alongside Kafka. **No advantage, no migration.**
