laserdata

Prepared for **Juspay**

Real-time release success rates for Juspay deployments, on LaserData.

Every payment's outcome, tagged with its release, reaches the A/B comparison **in milliseconds, so a bad release is aborted in seconds**. It runs beside Kafka and ClickHouse, so nothing else has to move.

One release, one defect,
as the event log sees it.
Now multiply by 300 million+ payments a day.

14:32:11.402	payment.failed	2026.10.20.0 at 25% · CARD · 3DS_REDIRECT_ERROR
14:32:11.415	outcome.counted	A/B guard · +13 ms
14:32:13.282	release.verdict	ABORT · success 82.4% vs 89.8% stable · z −5.0
14:32:13.284	rollout.applied	2026.10.20.0 → 0% · +2 ms · back on stable

From the creators of APACHE IGGY

15×
faster P99 latency
than Apache Kafka

4×
higher throughput
than Apache Kafka

60–70%
lower infrastructure cost
compute, storage and network

Apache Iggy vs Apache Kafka, LaserData testing. Results vary by workload.

What you shared	Autopilot staggers each deployment **"from 1% onwards"**; the A/B framework benchmarks it against the stable version and decides to "scale up the traffic or abort the deployment". (Juspay engineering, 2024; ClickHouse, 2023)
Where it fits	**The outcome lane:** each payment's final status and release, keyed by payment ID, read by the A/B comparison. Advisory, in shadow first; Kafka, ClickHouse and Grafana stay.
Next	**Rust-native:** a Rust consumer inside your rollout tooling, and an Iggy option for Hyperswitch's event source.
Underneath	**One durable event log.** LaserData, powered by Apache Iggy.

Try it in 15 minutes. Let the numbers decide.

A ready-made kit for Juspay: **3,500 payments a second through a staggered release with a defect injected**, an A/B guard that scales up or aborts, API logs next door and a Kafka shadow bridge. It prints your lane's p99 every second.

Open the Juspay kit and write-up →

Then a 2–4 week evaluation on one mirrored payment-attempt topic, beside Kafka and ClickHouse. **No advantage, no migration.**

The Juspay name identifies the intended reader only; no affiliation is implied. Facts are from the public posts "Scaling to 125 Million Transactions per Day: Juspay's Engineering Principles" (Hyperswitch on DEV, 2024), "Mastering A/B Testing with Clickhouse" (Juspay blog, 2023), "Fintech Leader Juspay Analyzes Over 50 Million Daily Payment Transactions in Real-Time with ClickHouse" (ClickHouse blog, 2023) and the Juspay blog (2026, 300 million+ transactions a day). The 7.5 s figure is ClickHouse's documented default for its Kafka engine, not a Juspay setting; the slide does not say how fast Juspay's comparison runs today. Releases, payments, timestamps, rates and the decision are illustrative.
